CrossLang is hiring

About Us

CrossLang is a Ghent-based technology company specializing in Machine Translation (MT) and multilingual Natural Language Processing (NLP).

Our interdisciplinary team, bringing together business analysts, engineers, linguists and researchers, provides human language technology services for multinational corporate customers. To support our growth in the translation technology market, we are currently looking for someone with a localization engineering background to support our customers in maintaining and developing their translation infrastructure.

Your job

You will be involved in the maintenance of the translation and terminology infrastructure of our clients. You will directly interact with users to support them with questions or issues they might have and think along with them to optimize and improve their processes. You will be involved in specifying and testing new features that have been implemented on the client's request and ensure they conform to the specification.

This is an inhouse position at our offices in Gentbrugge.

Your profile

We are looking for someone with a localization engineering background and the following skills/experience:

➔ Practical knowledge of the translation tools most commonly used in the translation industry, both standalone and client-server and/or cloud-based (including SDL Trados Studio, SDL MultiTerm, SDL GroupShare).

➔ In-depth understanding of terminology management principles and methods.

➔ Hands-on experience with terminology-related tools and processes.
